

## Shaft Seals

- ACST-4 shaft seals are used on both ends of the rotor shaft for superior sealing
- Each shaft seal assembly consists of one virgin teflon sleeve and three quad rings, which fit snugly over the teflon sleeve
- The teflon sleeve has a smooth self lubricated surface creating a tight seal with the quad rings
- Also available in a packing gland style shaft seal air purge assembly consisting of a lantern ring, 2 lip seals, lot teflon packing and an adjusting pusher plate
- Air purge seals connection option for severe applications
